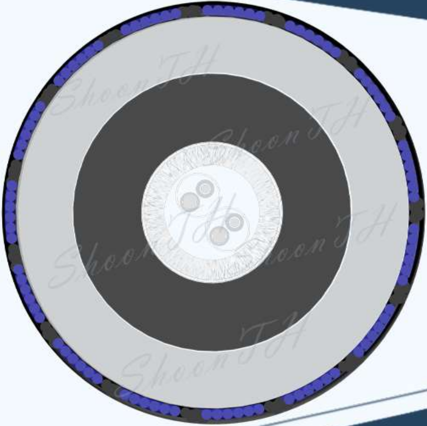
Customized Palladium Core

The cores of Pure Series Cable customized to the sound frequency. It’ s more suitable for the restoration of sound and the display of musical details within the auditory range of hearing.



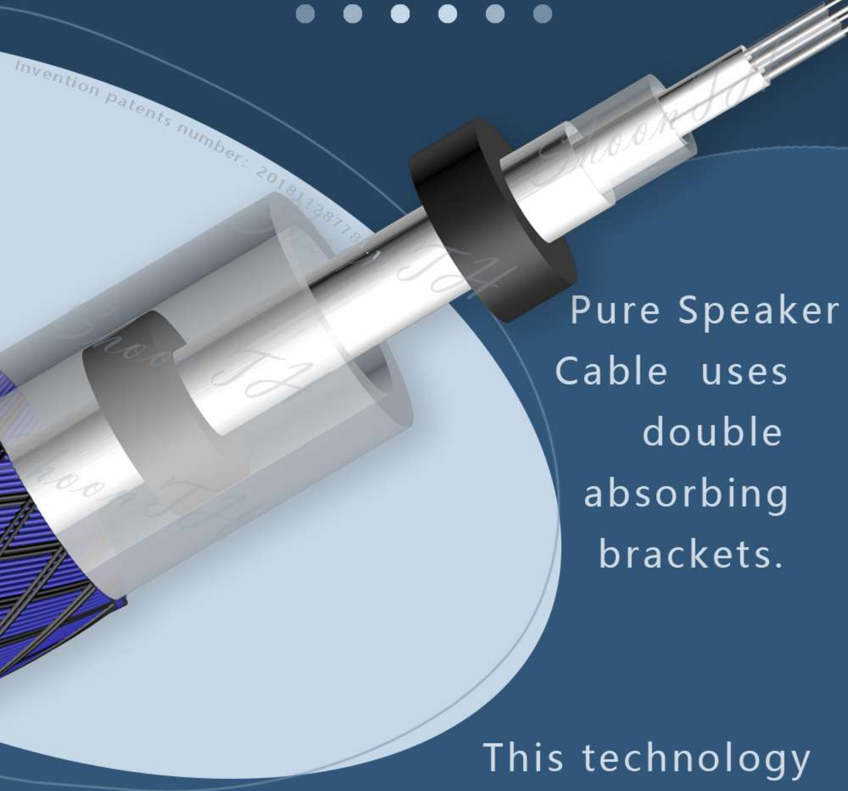
The core is wrapped in a large aperture PTFE insulation on the outside, which is resistant to high temperatures and reduces the distortion of electron bounce.

Double Shielding Forms

Shoon TH

The double shielding forms can absorb external vibration effectively, and isolate the external vibration conducted to the core, so as to reduce the distortion of music details.

Double Wave-Absorbing Brackets



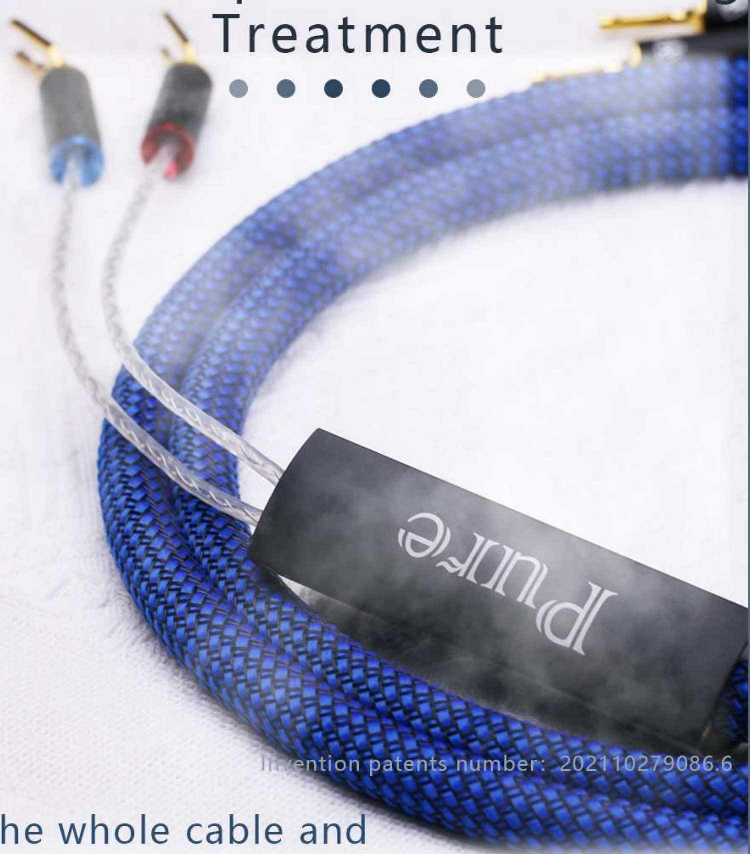
Pure Speaker Cable uses double absorbing brackets.

This technology can effectively absorb electromagnetic interference and mechanical vibration interference.

Wave-Absorbing Ring

The wave-Absorbing rings technology can effectively isolate the high-frequency electromagnetic interference, and reduce the distortion caused by external vibration on core conduction.

-196℃ Three-Stage Low-Temperature Freezing Treatment



Invention patents number: 202110279086.6

The whole cable and

plugs are processed by three-stage low-temperature feezing treatment at -196℃.

This method can effectively improve the metal grain gap and structure, and greatly improve the probablity of electron scattering, thereby improving electrical conductivity.

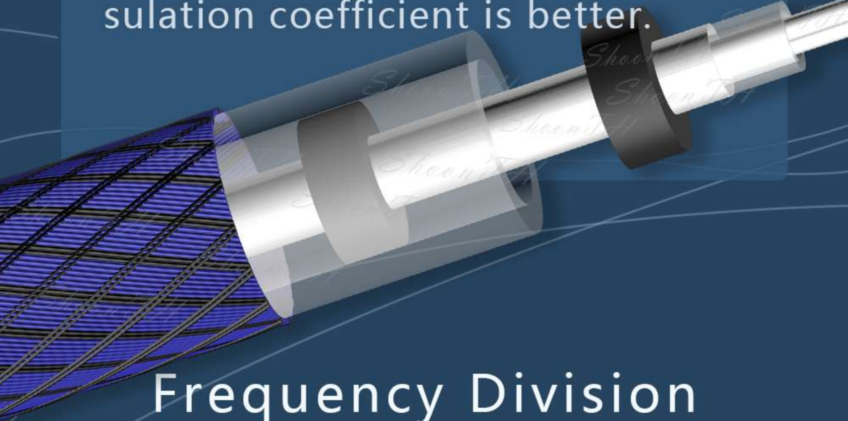
Silicone Shockproof Sleeve

ShoonTH originally use silicone shockproof sleeve.

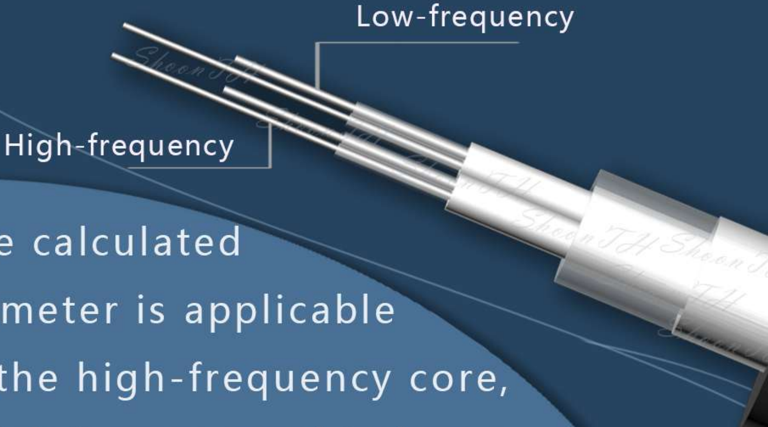
This process method can make the whole cable softer, and more resistant to high temperature and high pressure.

It can greatly absorb vibration

and reduce vibration transmission. Relatively speaking, the insulation coefficient is better.



Frequency Division Conduction

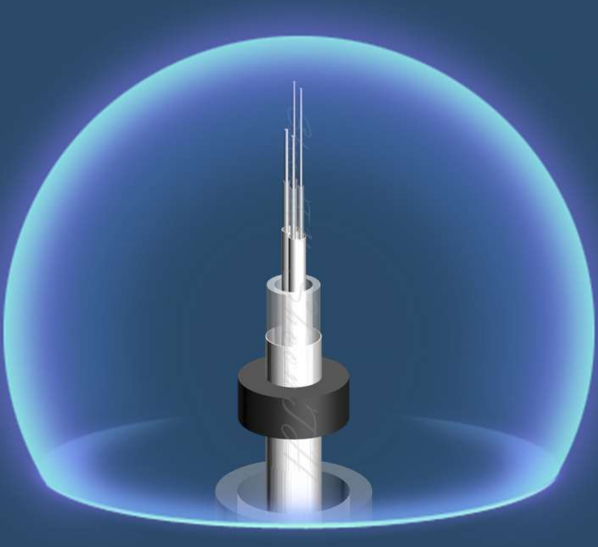


The calculated diameter is applicable to the high-frequency core,

Shoon TH

which is processed independently from the low-frequency core. This technology will make the whole frequency band sound more balanced, and reduce the peaks and valleys of the frequency band curve.

Air Insulation



The air insulation technology can reduce the contact area between the conductor and Teflon insulator, so as to reduce the capacitance effect caused by the absorption and instantaneous release of electrons by the insulator, and reduce the distortion of music signal transmission.

Cotton Yarn Fiber Sleeve

The cotton yarn fiber shockproof

sleeve and silicone tube can greatly absorb vibration and reduce vibration transmission.

SHOONTH
Company Profile

ShoonTH Technology Co., Ltd. develops, designs and produces high-fidelity audio cables, with a new concept. We have an excellent R&D team with members whom over the past 10 years have produced several patented technologies. ShoonTH products employ the latest technologies and are built with the highest standards.

ShoonTH is committed to becoming a leading high-fidelity cable brand, originating from China.
