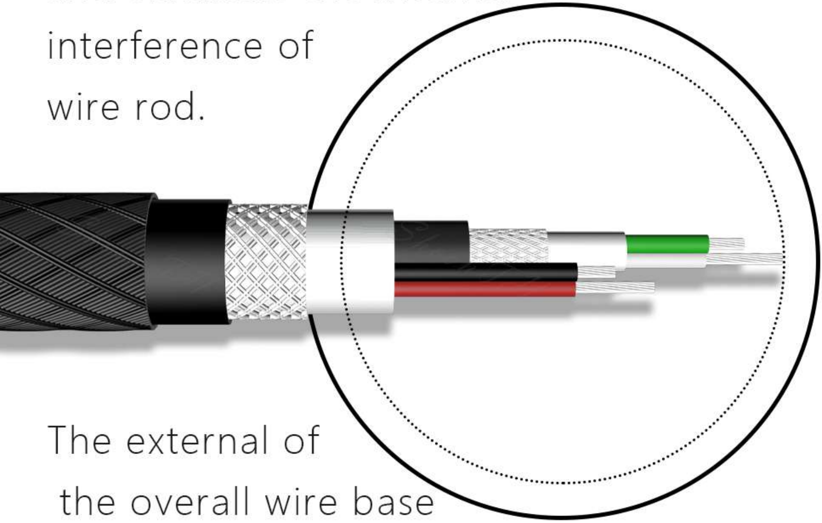
Cryogenic Silver

Cryogenic silver is a kind of silver conductor processed by special method, which has good transient and sound field performance.

Fast data transmission speed and low distortion, suitable for high-quality HiFi equipment.

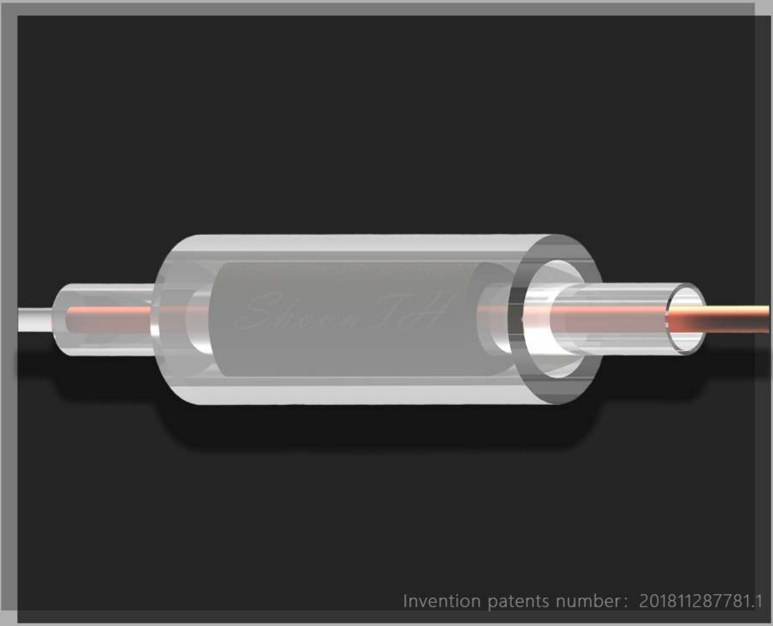
Independent Shielding

Independent shielding and single electric grounding can effectively isolate and eliminate the internal interference of wire rod.



The external of the overall wire base adopts multi-point grounding protection, which can eliminate the digital transmission error caused by external interference entering the wire base, so as to greatly improve the data transmission speed.

Absorbing Rings



Invention patents number: 201811287781.1

Absorbing rings technology can effectively isolate the high-frequency electromagnetic interference, and reduce the distortion caused by external vibration on core conduction.

-196℃ Three-Stage Low-Temperature Freezing Treatment

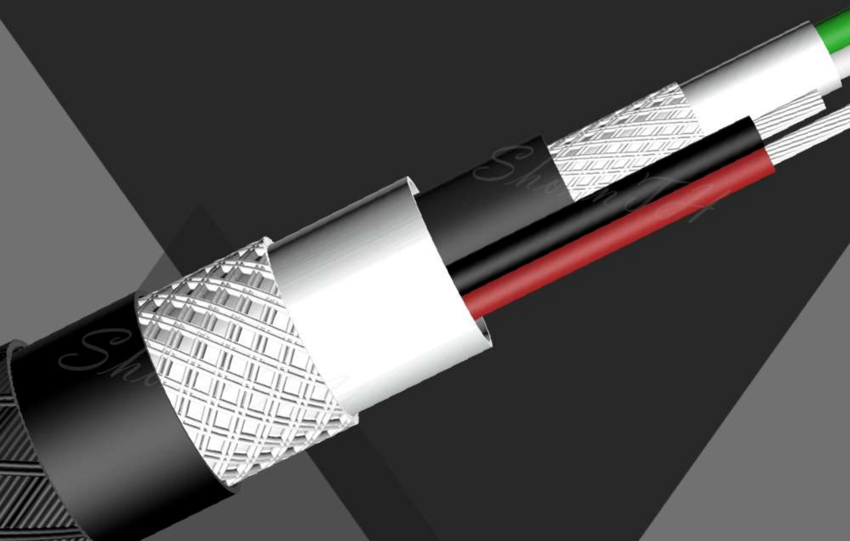
Invention patents number：202110279086.6

The whole cable and plugs are processed

by three-stage low-temperature freezing treatment at -196℃.

This method can effectively improve the metal grain gap and structure, and greatly improve the probablity of electron scattering, thereby improving electrical conductivity.

Double Shielding Forms



The double shields structure can absorb external vibration effectively, and isolate the external vibration conducted to the core, so as to reduce the distortion of music details.

Cotton Yarn Fiber Sleeve

The cotton yarn fiber shockproof sleeve and silicone tube can greatly absorb vibration and reduce vibration transmission.

SHOONTH

Company Profile

ShoonTH Technology Co., Ltd. develops, designs and produces high-fidelity audio cables, with a new concept. We have an excellent R&D team with members whom over the past 10 years have produced several patented technologies. ShoonTH products employ the latest technologies and are built with the highest standards.

ShoonTH is committed to becoming a leading high-fidelity cable brand, originating from China.
